

MOULD CENTERER BALL GUIDANCE

INCLINED BALL CIRCUITS

Our range of centering devices includes a mould centerer with ball circuits.

Centerer with integrated ball circuits in a compact block.

The inclined ball circuits increase the lifetime of the unit.

Manufactured in steel 1.2379, with a more homogenous structure and finer carbides.

BENEFITS :

Minimal friction with better adjustment, increasing the quality of injected product.

- Great agility of motion.
- Endless travel with balls re-circulating.
- Tighter working tolerances.
- Low maintenance.
- High working temperature.
